

**d+b facades**  
OVERCLADDING SPECIALISTS

Chelmsford College

## PROJECT SCOPE

Insulated aluminium rainscreen overcladding and high-performance timber-aluminium composite replacement windows. Other works included replacement of some aluminium doors and re-spray of others, single ply roof overlay, replacement of aluminium curtain wall, insulated panels to roof-top structures and demolition of a small projecting balcony prior to overcladding.

### Client Testimonial

*The site looks great, we continue to get compliments about how different the building now looks and how much warmer it is, the transformation was not only visual! We have taken the opportunity to renew the boiler plant and hope to see some substantial savings in running costs over the next year.*
