

Planting Woodland Species on Campus

Fife College

The project

Between 2018 and 2019, Fife College planted trees in partnership with the Woodland Trust. The trees were donated and contributed to support the Woodland Trust's National Planting Project. The college was helped by Fife Council in identifying areas suitable for tree planting.

Outcomes and implications

- **410 trees** were planted across both the Dunfermline and Glenrothes campuses
- The species planted, which include Dog Rose, Rowan, Elder, Blackthorn, Crab Apple, Hazel, attract **local pollinators** and are beneficial to the **local biodiversity**
- The trees were planted by groundkeeping staff and students, with **120** of them being **planted by 15 furniture students** who had previously worked with the Woodland Trust on other projects

SDGs

By using greenspace on campus to plant trees that are **beneficial to the local biodiversity** and support the work of the Woodland Trust by contributing to **increase woodland cover** the project supports **SDG15**

By **collaborating** with the Woodland Trust and Fife Council the project is also an example of achieving **SDG17**
