

Introducing myPTP

myPTP, developed by Liftshare, is the first ever automated personalised travel planning tool to integrate data for all modes of transport. Inc liftshare!

It delivers a detailed and interactive personalised travel plan (PTP).

There are three ways in which myPTP can be administered:

- Proactive PTP – emailing individuals with their travel plans
- Online consumer-facing widget
- Scoping analysis – a data analysis exercise to give you unique travel insight.

The benefits of myPTP

The business benefits of myPTP include:

- Reducing demand for parking
- Reduces congestion
- Recruitment and retention of staff
- Good practice for corporate social responsibility.

Scoping data analysis can help further to:

- Inform parking management strategies
- Aid allocation of parking permits
- Provide evidence required to speak with local transport providers about accessibility
- Understand modal and behaviour change opportunities amongst your staff.

Proactive PTP

The proactive approach can be delivered in 2 ways:

- A one-to-one approach - workplace or a tablet on the doorstep of a household
- A bulk upload of data, allowing (up to 500 at a time).

We need:

name, email address, start and end postcodes, and arrival and departure times.

The screenshot shows an email interface. At the top left is the 'myPTP' logo. At the top right is the 'liftshare for business' logo. The email body starts with 'Hi Lex,'. Below this is a paragraph: 'Please see below your personal travel plan for your journey from Thorpe Marriott Post Office, Acres Way, Norwich NR8 6UT, UK to Liftshare HQ on 17/08/2016 arriving at 08:00, and returning at 17:00.' Below the text is a diagram of a journey. It consists of a vertical green line with two circles at the ends. The top circle is labeled 'Thorpe Marriott Post Office' with 'Acres Way' underneath it. The bottom circle is labeled 'Liftshare HQ'. At the bottom of the email is a green button with the text 'View journey results'.

case study

North Bristol NHS Trust

North Bristol NHS Trust experienced unprecedented levels of change when two of its hospital sites merged. A Trust-wide Environmental Policy was adopted, and changing travel behaviour was central to this.

The hospital now provides staff with discounted bus tickets, a cycle-to-work scheme, car sharing benefits, access to myPTP. Using 'opt-in' methodology, the Trust has produced 511 myPTP travel plans for staff, focusing on: using the 1:1 function as and when staff request a plan, new joiners, employees relocating, and staff who are declined a parking permit.

fast facts

511 plans delivered

23% response rate to the follow-up survey

43% looked into changing their travel behaviour as a result of myPTP

Modal shift of 18%

Single-occupancy vehicle journeys reduced by 17.8%

Cycling to work increased by 25%

Bus use doubled

37.5% of travel to the site is now by more sustainable methods

Park and Ride use increased by 150%

Eastleigh Borough Council decided to move office as part of a long-term vision to relocate closer to the town centre to better serve residents, becoming more visible and accessible to the community.

fast facts

To help with the move Eastleigh Borough Council used myPTP travel plans through Liftshare. A strategy to improve and manage access to the new site focusing on promoting sustainable modes of transport. The move was an opportunity to encourage employees to change their behaviour and consider walking, cycling, public transport or car sharing.

Using the 'opt-in' methodology, the Council produced 160 plans using the 1:1 function. Staff members were then further given the chance to receive a personalised travel plan to the new office by way of a tick box on the annual travel survey.

The travel survey was sent out to all staff in August 2013 and had 189 staff members respond to it. Out of the respondents, there was a very high opt-in rate of 163 staff requesting a myPTP.

The follow-up survey was automatically sent to members of staff that had received a plan and was able to gather data about their past travel behaviour.

Results showed that 34% of respondents said they had considered changing the way they travelled as a result of receiving their myPTP. This led to a modal shift of 26%, which saw Single Occupancy Vehicle journeys reduce by 32.4%. The number of those that cycled increased by 80% and train use more than doubled.

Eastleigh Borough Council are now implementing myPTP as part of their New Starter process, encouraging staff to travel more sustainability from day one as they work out their new commute.

180 plans delivered

29.4% response rate
to the follow-up survey

34% of individuals considered
changing as a result of their myPTP

Modal shift is 26%

Staff travelling by SOV reduced
by **32.4%** - before myPTP,
staff travelling by SOV was
78.7% - after myPTP, this
reduced to **53.2%**

Cycling increased by 80%
- going from **10.6%** to **19.1%**

Train use more than doubled
- going from **4.3%** to **14.8%**

objectives

Reduce stress on car
parks and people

Support your health
and wellbeing agenda

Ease strain on
local congestion

Relocating
offices

Online consumer-facing widget

The online widget is available for businesses to host on their consumer-facing internet or intranet pages for individuals to use and deliver a plan themselves.

The widget is a standalone application embedded into a third party website using a small piece of code.

Scoping Analysis

Scoping is a back-end data analysis function for businesses to gain unique insight and intelligence into travel modes and behaviours.

These insights provide meaningful information that can help influence your travel, sustainability and corporate social responsibility planning.

myPTP

Monitoring dashboard for liftshare.com

Overall statistics

Total PTPs created	11193
Total emails sent	5786
Total emails opened	381 (6.58%)
Total emails viewed online	300 (5.18%)
Total commuter distance by road	687,668.4 miles
Average commuter distance by road	62.9 miles
Average commuter duration by road	1 hr 48 min

Original mode of transport

Commute distance by road

- Clients will be able to access monitoring pages in order to gain insights and analyse results
- Those users requesting a PTP who opt to include their email address will be sent a survey at 2 weeks and 12 weeks. It will be these survey results that form the evaluation outcomes.
